

# What You **WANT!**

## Maintenance & Tune-Ups

After the Heating Season, arrange for a Clean Burn Furnace Burner Tune-Up. Get the most BTU's and life out of your furnace while saving money.

## Burner Tune-Up Parts

Take advantage of our burner tune-up special each Spring from March 1 through June 30. Our factory-trained and insured service technicians will completely disassemble, clean and rebuild your burner in our shop. We'll replace any worn parts with genuine Clean Burn parts. Burners require proper maintenance every two to three years to operate at peak efficiency. Take advantage of this service – it ultimately means money in your pocket.

### Heavy Duty Construction

A combustion chamber made of heavier, thicker steel results in extra durability. On average, our furnaces weigh up to 200 lbs. more than many competitive furnaces

### Three-Pass Heat Exchanger

Large, round flow tubes are staggered to enhance air flow and provide higher BTU output, higher efficiency and lower stack temperatures.

### Patented burners with pre-heater block

An innovative burner designed exclusively to burn used oil. Pre-heater block assembly heats the oil and air supply to ensure consistent oil viscosity and temperature to the nozzle for complete combustion. Swing-away burner design provides quick, easy access to the combustion chamber. No need to disconnect oil, air and electrical lines.

### Heavy Duty Oil Pump

A beefy fuel flow control pump allows the furnace to be installed up to 300 ft. from the oil storage tank. It also permits the use of an outside storage tank where, in colder temperatures, many competitive pumps can't function.
